

SwissSenseSynergy: Secure Localization and Privacy-Preserving Location-Based Services

Andreea Hossmann-Picu
Universität Bern, Switzerland

March 30, 2015

The SwissSenseSynergy Project

- > three years (01.2015–12.2017), ~1M CHF
- > four partners
 - University of Berne (project coordinator)
~> *Prof. Torsten Braun*
 - University of Geneva ~> *Prof. José Rolim*
 - SUPSI (U. of Applied Sciences & Arts of S Switz.)
~> *Prof. Silvia Giordano*
 - Chalmers University ~> *Prof. Aikaterini Mitrokotsa,*
Dr. Christos Dimitrakakis
- > four SNF PhD students 60% ~> one per partner
- > one SNF postdoc 100%
~> split 40-30-30% among the first three partners

U. Bern Subproject: MobLocator

- 1 Localization and tracking [Zan and Marcel]
 - Femto cells = anchor nodes
 - High density \Rightarrow better accuracy
 - Fine grained mobility model/prediction

Outline

Using the Insights

U. Bern Subproject: MobLocator

- 1 Localization and tracking [Zan and Marcel]
 - Femto cells = anchor nodes
 - High density \Rightarrow better accuracy
 - Fine grained mobility model/prediction
- 2 Wireless network planning [Andreea]
 - Location, social, environment profile
 \Rightarrow advanced (mobility, behavior) prediction
 - User location/mobility \Rightarrow improved handovers
 - Usage profile \Rightarrow dynamic radio resource alloc.

Using the Insights

From Data to Insights

User Data (from mobile phones)

- > location and mobility
- > activity
- > social, behavioral, demographic

Context Data (from sensors and crowdsensing)

- > environment (weather, air quality etc.)
- > infrastructure (traffic, schedules etc.)
- > specialized (in retail – items on sale etc.)

Data Model: User Data

*from [Misra et al. 2014]

Outline

Motivation

SwissSenseSynergy:
Project Overview

From Data to Insights

Using the Insights

Data Model: Issues

- > What about context data?
- > New types of nodes (states of the context):
 - rain, pollen, noise etc
 - car accident, conductors' strike etc
 - application-specific nodes
- > New types of links:
 - causality (e.g. “skip tennis practice *due to* rain”)
 - location of context (e.g. “car accident *near* exit 3”)
 - links among more than two nodes

Outline

Motivation

SwissSenseSynergy:
Project Overview

From Data to Insights

Using the Insights

User ↔ Context Graph

- > Multi-mode – many types of nodes
- > Multi-plex – many types of links
- > Hypergraph?

Challenges:

- > Empirical exploration (small world, scale free etc.)
- > Time varying – many time scales
- > Efficient implementation (e.g. Neo4j)
- > etc

Outline

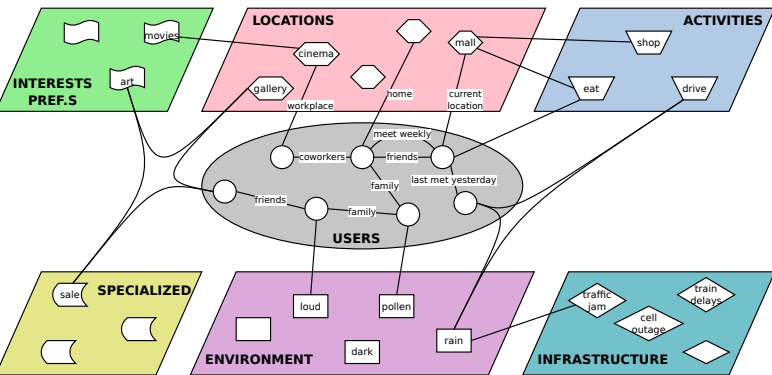

Motivation

SwissSenseSynergy:

Using the Insights

Using the insights

Dense LTE femtocell deployment – **challenges:**

- > intractable list of neighbor cells,
- > unnecessary handovers,

- > high energy consumption,
- > lower capacity than larger cells,
- > interference etc,

- > access control.

Outline

Motivation

SwissSenseSynergy:
Project Overview

From Data to Insights

Using the Insights

Using the insights: handovers

Location/Mobility Prediction for Handovers

- > Mobility prediction: statistical vs. inertial
- > Next cell prediction \Rightarrow handover speed-up, resource reservation etc.
- > Both studied extensively!

Outline

Motivation

SwissSenseSynergy:
Project Overview

From Data to Insights

Using the Insights

Using the insights: handovers

Location/Mobility Prediction for Handovers

- > Mobility prediction: statistical vs. inertial
- > Next cell prediction \Rightarrow handover speed-up, resource reservation etc.
- > Both studied extensively!

Trying to reinvent the wheel?

Outline

Motivation

SwissSenseSynergy:
Project Overview

From Data to Insights

Using the Insights

Adapting and Improving the Wheel!

Femtocells – new characteristics, new challenges:

- > smaller area \Rightarrow lower sojourn time,
- > indoors (walls) \Rightarrow difficult cell border conditions,
- > high mobility users especially problematic...

Outline

Motivation

SwissSenseSynergy:
Project Overview

From Data to Insights

Using the Insights

Mobility prediction:

- > what kind of mobility information is relevant?
- > what accuracy is expected?
- > is outdoor mobility prediction sufficient?

Handover strategies:

- > existing algorithm(s) for the femtocell challenge?
- > room for improvement in these algorithms?
- > needed prediction accuracy for the improvement?

Outline

Motivation

SwissSenseSynergy:
Project Overview

From Data to Insights

Using the Insights

Using the insights: Access to Femtocells

- > Current options: open, closed, hybrid.
- > Inflexible, maybe even problematic...
- > Better: location-based access control.

Outline

Motivation

SwissSenseSynergy:
Project Overview

From Data to Insights

Using the Insights

Conclusions

The SwissSenseSynergy project:

- > jointly mining data from a variety of sources
- > predict user mobility and behavior
- > use predictions for better location-based services
- > ... and for tackling various LTE challenges
